

Sentrigard™ Weathertight Warranty Program Administered by NB Handy

Building Owner Maintenance and Inspection Requirements

All quality roofing systems require routine scheduled maintenance in order to achieve maximum roofing system life and performance. Routine maintenance is the building Owner's responsibility. Many roofing system issues should be directly addressed by professional roofing companies; however, there are monitoring and cleaning requirements that the Owner must fulfill. The Sentrigard Weathertight Warranty is issued based on the Owner's agreement to perform these routine inspections and maintenance procedures. Roof leaks resulting from normal maintenance items (or lack of attention to normal maintenance items) are not covered by the Sentrigard Weathertight Warranty Program and any failure to properly maintain the roof system will render the Sentrigard Warranty null and void.

Building Owner Maintenance and Inspection Requirements

1. The roof system must be inspected at least twice yearly, typically late spring and late fall, and immediately following severe storms. Buildings that generate exhaust, flying debris, or are located in other corrosive atmospheres should be inspected more frequently. Roof drainage systems (to include, gutters, drains, downspouts, scuppers, etc.) should be cleaned of all debris at least twice yearly. Any debris that is on the roofing system or in the roof drainage system following a storm should be immediately removed.

A routine inspection schedule must be established and documented. Each inspection must be recorded and any maintenance initiated and completed must be documented.

Access to the roofing system must be controlled and all access must be documented. Foot traffic can be damaging to many roof systems. Any equipment installed post-roofing completion must be approved prior to installation by Sentrigard Metal Roof Systems (SMRS) and the installation must be in accordance with SMRS guidelines

Any cleaning chemicals, other chemicals/compounds or maintenance coatings applied to the roof system must be pre-approved by SMRS. Many available chemicals and coatings will render the roof system warranty null and void.

SMRS should be immediately notified of any roof system leak. A description of the leak to include building location (of the leak) and circumstances of the leak is required prior to building inspection. If it is determined that the leak is not resulting from the roof system (as covered by the Sentrigard Warranty), an inspection fee and all travel related expenses will be invoiced to the building owner.

2. Many roof panel systems are finished with high-performance paint coating systems. The coating system (if applicable) must be maintained in accordance with the paint manufacturer's guidelines and recommendations.
3. It is understood by the building Owner that this "Building Owner Maintenance and Inspection Requirements" document is a part of the SENTRIGARD Weathertight Warranty.

Go to sentrigard.com/tools for the most accurate and up to date owner requirements documentation prior to twice yearly inspections.
